

MODULES THAT ENHANCE YOUR TIME & ATTENDANCE APPLICATION

Attendance on Demand Core has four modules to enhance your capabilities. Modules can be configured at any time and can save you time and money. Options are Employee Self-Service, Leave Management, Incidents & Points Tracking, and Benefit Accruals.

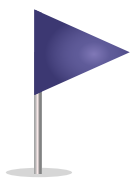

Employee Self-Service

Take the pressure off Human Resources and Managers by providing employees with real-time information. Empower your employees by providing them with convenient and secure access to view their timecard, schedules, benefits and more. You can also allow employees to punch based on defined geo-locations.

Leave Management

Manual leave management interrupts productivity, allows for inaccuracies, increases costs, and even opens businesses to potential litigation if protocols aren't followed correctly. By automating leave management, organizations can empower employees and support supervisors while increasing productivity, ensuring workforce coverage, reducing administrative costs and improving recordkeeping.

Points Tracking

Organizations that face employee absenteeism and attendance issues can find their labor costs rising, worker morale suffering, and productivity reducing as a result. Implementing and managing your attendance policy through Attendance on Demand provides a simple solution that automates the placement of your employees into Corrective Actions levels and generates their Warning Letters. Reduce labor costs and improve workforce management.

Benefit Accruals

In today's competitive market, the importance of benefits cannot be overstated. Complex benefit rules make manual calculations difficult and recordkeeping a time-consuming process. Automating benefit accrual offers advantages to employees, supervisors, and the organization.
