Information Controls, Inc.

Access Control + Time & Attendance

Time & attendance + building access – FINALLY INTEGRATED.

When you're looking for time & attendance with access control, Information Controls' software solutions top the list. These two pieces of software are designed to bridge together — an option that cannot be found in other solutions.

ONE CARD. DUAL PURPOSE.

Employee badges work across both the time & attendance and building access platforms. One card to gain access to the building and to punch in for the day. Combined reports can be run to see how these two factors are impacting your organization.

Easy to use AND it saves you time.

Our secure, browser-based software is easy to use and doesn't require the energy of maintenance by your IT department. It saves your employees – and you – time by flowing instantly. Changes in employee status happen in a flash across both time and access. The shift schedules you use in time & attendance are automatically shared as door access permissions, eliminating the need to maintain multiple databases. Access to the building and employee status are changed simultaneously in both applications. It's fast and easy!

Seamless flow between time & attendance and access control.

New hire is entered into time and attendance → New hire is instantly added to access control software → Schedules can be entered, monitored across both systems, and reports can be generated → Employee leaves & is removed from time and attendance → Employee is instantly removed from access control software & building access is restricted
